

Preferences: risk neutral to moderately risk averse

American rule remains in force; costs unchanged at multiplier 1.

Changed decisions only. Original: risk neutral; target: risk averse.

Direct: rule/preferences first. Entry, Offers, Exit: opponent contributions, averaged over six replacement orders. Change equals their sum plus Remaining, before rounding.

Probability changes are percentage points; pure demand/offer changes are fractions of damages. Mixed offers are shown as action probabilities, not averages.

*: partial, selection-dependent accounting; Remaining is the target action/mix minus the selected full-target-opponent response, not a fifth causal mechanism. †: tie-sensitive. §: sensitive to an unvisited opponent policy. ‡: conditional on an intermediate history not reached in that hybrid.

Undefined counterfactual: no opponent-and-chance reach; no numerical attribution is shown. These are conditional comparisons, not observed adjustment dynamics.

0 histories no longer reached; 10 newly reached. These have no comparable endpoint action and are omitted. Detailed diagnostics accompany the table.
