

Fee shifting: American to British

Both players remain moderately risk averse; costs unchanged at multiplier 1.

Changed decisions only. Original: American; target: British.

Direct: rule/preferences first. Entry, Offers, Exit: opponent contributions, averaged over six replacement orders. Four contributions sum to Change, before rounding.

Probability changes are percentage points; pure demand/offer changes are fractions of damages. Mixed offers are shown as action probabilities, not averages.

‡: tie-sensitive allocation. *: sensitive to an unvisited opponent policy. ‡: a conditional policy at an intermediate history not reached in that hybrid. Selection-dependent: the original-preserving optimal response does not reproduce the target action/mix; no four-way allocation is claimed. Undefined counterfactual: no opponent-and-chance reach.

17 histories no longer reached; 8 newly reached. These have no comparable endpoint action and are omitted. Detailed diagnostics accompany the table.
