

Fee shifting: American to British

Both players remain moderately risk averse; costs unchanged at multiplier 4.

Changed decisions only. Original: American; target: British.

Decision	Signal	Original	Target	Change	Direct	Entry	Offers	Exit
Plaintiff								
File (%) ^{†*}	0.45	0	79.72	+79.72	Selection-dependent

Offer / continue ^{†*‡}	0.05	0.05	0.25	+0.20	Selection-dependent			

Direct: rule/preferences first. Entry, Offers, Exit: opponent contributions, averaged over six replacement orders. Four contributions sum to Change, before rounding.

Probability changes are percentage points; pure demand/offer changes are fractions of damages. Mixed offers are shown as action probabilities, not averages.

†: tie-sensitive allocation. *: sensitive to an unvisited opponent policy. ‡: a conditional policy at an intermediate history not reached in that hybrid. Selection-dependent: the original-preserving optimal response does not reproduce the target action/mix; no four-way allocation is claimed. Undefined counterfactual: no opponent-and-chance reach.

6 histories no longer reached; 9 newly reached. These have no comparable endpoint action and are omitted. Detailed diagnostics accompany the table.
