

Preferences: risk neutral to moderately risk averse

American rule remains in force; costs unchanged at multiplier 4.

Changed decisions only. Original: risk neutral; target: risk averse.

Decision	Signal	Original	Target	Change	Direct	Entry	Offers	Exit

Direct: rule/preferences first. Entry, Offers, Exit: opponent contributions, averaged over six replacement orders. Four contributions sum to Change, before rounding.

Probability changes are percentage points; pure demand/offer changes are fractions of damages. Mixed offers are shown as action probabilities, not averages.

†: tie-sensitive allocation. *: sensitive to an unvisited opponent policy. ‡: a conditional policy at an intermediate history not reached in that hybrid. Selection-dependent: the original-preserving optimal response does not reproduce the target action/mix; no four-way allocation is claimed. Undefined counterfactual: no opponent-and-chance reach.

8 histories no longer reached; 5 newly reached. These have no comparable endpoint action and are omitted. Detailed diagnostics accompany the table.
